

Save the Date for ICDC11!

Dear Colleagues,

The 11th International Carbon Dioxide Conference (ICDC11) will be hosted in Manaus, Brazil from July 29th – August 2nd, 2024, at the Vasco Vasques Convention Center. ICDC11 was originally planned for 2021 but was delayed due to the COVID-19 pandemic and subsequent logistical challenges. Manaus was selected to allow visitors to experience a taste of the Amazon, a region central to understanding the global carbon cycle.

Taking place in the heart of Amazônia, amidst an El Niño, and on the heels of the first Global Stocktake, ICDC11 represents an important opportunity to consider how improved understanding of terrestrial and oceanic carbon fluxes can inform carbon management and mitigation policy. The conference will provide the platform to have a dialogue between communities focused on understanding our latest science, technological capabilities and the needs, priorities and open questions of the policy and management communities.

At ICDC11, **in-person attendance is highly encouraged**, as interactive virtual participation may be difficult. Some degree of hybrid plenary engagement is being investigated, but internet bandwidth may limit this. Further information about the venue, website, abstract and registration due dates will be provided shortly. Please plan for this exciting and important conference.

In addition, the 22nd WMO/IAEA Meeting on Carbon Dioxide, Other Greenhouse Gases and Related Measurement Techniques (GGMT-2024) will take place the following week, in São Jose dos Campos (São Paulo state).

We look forward to your participation in ICDC11 and GGMT-2024!
